### CA/493U

---

Hana Wireless™ proudly presents the CA/493U rack or wall mounted indoor case, a simple but unique way of mounting and enclosing the RB/493 family of MikroTik™ Routerboards.

The case is a high quality, powder coated metal enclosure that includes standoffs, assembly screws, mounting hardware and standard 1U rack or wall mount tabs. This allows the user to protect, encase and showcase one of the most powerful router platforms on the market today, preserving the value and allowing for simple integration into the most common 19" network racks. The simple design also allows the user to mount the router on the wall by simply rotating the mounting tabs if a 1U size rack is not available. The CA/493U also allows the user to access all 9 Ethernet ports, and allows the user to power the router using a standard 120/240 power supply (not included).

#### Includes:

- Silver powder coated case
- Assembly screws
- Mounting tabs & screws
- Vents for heat dissipation

The Hana Wireless CA/493U case is available through Streakwave Wireless, and its resellers. It is available in custom colors and with custom logos upon request.
