

# RMS MANAGEMENT

RMS MANAGEMENT gives you full control over your fleet of Teltonika Networks routers and gateways, ensuring their security and availability. RMS offers many features to save your time and expenses while managing everything remotely – even without a public IP!

## Device management & configuration

Remotely monitor and control Teltonika Networks products: personalize dashboard using custom table presets, update firmware, upload/restore configurations within a few clicks. Management of a single device or huge fleet becomes a simple task with reduced costs.

## Device & ISP service performance analysis

Set up a custom report system that contains information on relevant device parameters. Reports can be generated periodically or whenever needed. All generated reports are stored on RMS servers and can be downloaded at any point for future analysis.

## WiFi & Hotspot monitoring

Ensure top quality of service and user experience while monitoring your company routers with active WiFi/Hotspot and analyzing their performance by checking information about active users, data usage, and use time.

## View device information, metrics & latest logs

Analyze your devices with RMS collected data. Every router activated in RMS periodically reports various telemetry and events information, which are logged and processed for future performance checks or maintenance planning.

## Device location monitoring

RMS location monitoring enables tracking and monitoring for a single device or the whole fleet with ease. With information stored in RMS servers, it is possible to track movement history.

## Port scanning & current port status

For remote devices, finding which physical ports are in use can be a tedious and expensive task. Port scan enables seeing active Ethernet ports and devices connected to them. Moreover, you may create RMS connect access links with a single click.

## RMS MANAGEMENT PRICING

We offer a 30-day trial period for every new device, so you can try RMS free of charge! After that, the Management service is available in either packages of 5 or 10 years, or credits worth 30 days per device each.

# RMS CONNECT

RMS CONNECT is a unified access system that lets you remotely reach and control smart devices, such as industrial PCs, CCTV cameras, and PoS systems, using RMS alongside compatible routers or gateways with supported protocols. With its web integration tools, there's no need for a public IP address or additional installations and VPN services. RMS Connect helps you save time and money by managing your fleet of devices remotely with simplicity and efficiency.

## ALL THE WAYS TO CONNECT TO YOUR DEVICES REMOTELY

### HTTP(S)

HTTP/HTTPS protocol compatibility enables easy access to the Web User Interface of any smart devices – remotely! This includes routers, switches, IP/CCTV cameras, NVR, NAS, and other industrial equipment with WebUI.

### SSH

This protocol lets you create an encrypted link via SSH tunnels to a Command Line Interface of an end device. Unlimited configuration via CLI opens up new paths in remote control and management of 3rd party devices – even without a public IP address.

### Remote Desktop

This functionality gives you full control of any equipment running Windows, Linux, or MacOS that supports the RDP or VNC protocols, including machine interface and HMI (via VNC). Fast performance and easy configuration make this feature invaluable for remote IT support.

### Remote Mobile Devices

With RMS Connect's Remote Mobile Devices functionality, you can remotely access mobile devices running Android, iOS, or iPadOS. This is extremely useful in providing remote IT support for a variety of applications, such as PoS systems.

### SFTP

Secure File Transfer Protocol support provides remote file access, transfer, and management capabilities. RMS Connect SFTP support enables convenient content management for a variety of applications, especially Digital Signage.

### Telnet

This client-server protocol can be used to open a command line on a remote computer, typically a server. It's one of the oldest protocols for remotely reaching legacy devices like electricity grids and industrial machinery.

## RMS CONNECT PRICING

The Connect service is on-demand and available in either a 10-year, 150 GB package, or credits worth 2 GB each. The first 5 GB of data are free of charge for every company on RMS!

# RMS VPN

Large-scale networks with fleets of devices require the best security. RMS VPN is a quick, simple way to set up a VPN for your entire infrastructure, and can act as a secure M2M network for interconnecting remote systems without needing a dedicated server. Everything is configured automatically with VPN Quick Connect, while VPN Hub gives you full control over connected clients and routes.

## BENEFITS

**Easy access to multiple endpoints at the same time**

**Dedicated servers**

**Unlimited VPN clients**

**Top trusted OpenVPN protocol**

**Data usage reports**

**On demand service**

**Configuration-free set-up**

**Intelligent configuration check**

**Custom routing**

## RMS VPN PRICING

The VPN service are on-demand and available in either a 10-year, 150 GB package, or credits worth 2 GB each. The first 5 GB of data are free of charge for every company on RMS!
